MEMORANDUM

CASE INSTITUTE OF TECHNOLOGY
CLEVELAND, OHIO

TO: Prof. Ray E. Bolz, Head, Engineering Division DATE: 10 November 1962

FROM: Marshall F. Crouch, Physics Department

SUBJECT: As I mentioned to you briefly a few weeks ago, I feel that maintenance of an Institute amateur radio station is a very appropriate activity for an engineering college such as Case. Since it is a feature which may be helpful in attracting good students, and serves to complement some of the formal course offerings, I am hopeful that some sort of support can be offered by the Engineering Division.

Specifically, if the equipment needs of the station could be aided with surplus radio gear which may be in hand or offered in the future to the various engineering departments, this would be greatly appreciated.

I would like to chat with you briefly about this matter some time, so that I may learn about your ideas on the subject.
